

Self-adhesive ridge tape

Description

Ridge tape - effective protection of roof ridges

Ridge tape is a material with high vapor permeability, enabling efficient ventilation of the space between the roof covering and the roof thermal insulation. Good diffusion properties of the ridge tile underlay allow for free air flow ventilating the roof surface, while the appropriate tape structure prevents water, dust and dirt from penetrating under the roof covering from the outside.

The features behind the functionality of the ridge tape are primarily:

- flexibility,
- high vapor permeability,
- water resistance,
- resistance to weather conditions,
- easiness of application,
- protection against moisture condensation,
- durability.

Attributes

Segment	For home
Length [mb]	5 (+/-1%)
Width [cm]	31
